The art unit designated for this application has changed. Applicant(s) are hereby informed that future correspondence should be directed to Art Unit 1631.

The following is a quotation of 35 U.S.C. § 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. § 103, the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 C.F.R. § 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of potential 35 U.S.C. § 102(f) or (g) prior art under 35 U.S.C. § 103(a).

Claims 39-42, 46-49, 53, and 54 are rejected under 35 U.S.C. § 103(a) as being unpatentable over Ribí (P/N 5,156,810).

Ribí describes arrays devices whereon electrodes are arrayed on the surface of the device and it is utilized for biological assays including binding or capture reagents as summarized in the abstract. Such an array is described in column 9, lines 34-60, for example. An additional option is that of a flow cell for sample application to said array. A flow cell in the device is

described in column 12, lines 1-20. It is noted that the instant claims are broadly worded to indicate that a device with electrodes on its surface are adjacent an array of what is also electrodes. This, depending on what name is given to electrodes on an array they may be collection electrodes or array electrodes. It is also noted that the opposite side disposition is reasonably broadly interpreted as electrodes at various positions across an array surface with opposite sides all having electrodes thereon.

Thus, it would have been obvious to someone of ordinary skill in the art at the time of the instant invention to practice various array devices as described in Ribí and result in the generically claimed invention as rejected above.

Claims 43-45, 50-52, and 55-60 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

No claim is allowed.

Papers related to this application may be submitted to Technical Center 1600 by facsimile transmission. Papers should be faxed to Technical Center 1600 via the PTO Fax Center located in Crystal Mall 1. The faxing of such papers must conform with the notices published in the Official Gazette, 1096 OG 30 (November 15, 1988), 1156 OG 61 (November 16, 1993), and 1157 OG 94 (December 28, 1993) (See 37 CFR § 1.6(d)).
